TRANSPORT AND SHIPPING

Our products are shipped in the following formats – Keep dry and protect from damage!

XLED-LINE-EL42G-RGB

(max. 100x XLED-LINE-EL42G-RGB)

Individual box

Weight: max. 425 kgs
Dimensions (L x D x H) 120 x 80 x 100 cm
47.24" x 31.50" x 39.37"

Euro pallet (Standard 800 x 1200 mm)

Pallet weight: 50 to 450 kgs
Pallet height: 40 to 120 cm
15.75" to 47.24"

Euro pallet / Shipment

PRODUCT SPECIFICATIONS

XLED-LINE-EL42G-RGB is the ideal solution for creating captivating full-colour sceneries, stunning lighting effects, and cutting-edge lighting design projects. It excels in applications such as interactive media facades, programmable skyline elements, catenary lighting, architectural and building illumination, innovative urban lighting concepts, and video mapping on façades, skyscrapers, and monuments – delivering a high visual impact.

It is equally well-suited for illuminating various ceiling types and constructing realistic, dynamic light sculptures.

Equipped with DMX-512A control and advanced LED technology, the system produces vivid colours and supports synchronized video content. Its low power consumption, robust construction, and IP67-certified LED Dots make it fully prepared for harsh environmental conditions, both indoors and outdoors.

Thanks to our numerous mounting clips, the system allows for quick and secure installation, making the **XLED-LINE-EL42G-RGB** a flexible and efficient solution for both standard and complex lighting projects.

When combined with our **XLED-PS8-RDM**, the entire installation can be remotely monitored and controlled. The system offers real-time diagnostics and immediate error reporting, which minimizes downtime and significantly reduces maintenance efforts.

The customization options, including the number of dots, pixel pitch, cover type and finish, as well as housing and cable colours, allow the product to be tailored precisely to the architectural context and installation requirements.

The system is also designed for long-term reliability, using durable components that ensure stable performance and reduce the need for frequent servicing. This makes it especially suitable for installations in locations that are difficult to access or where operational continuity is essential.

Its thermal management system protects against overheating and ensures consistent output, even in demanding environments or during continuous operation.

Furthermore, the product supports industry-standard protocols, enabling seamless integration into existing lighting infrastructures and allowing centralized control of large-scale installations.

TEMPERATURE & ENVIRONMENT

Ambient temperature	min. -30°C (-22°F)	max. +50°C (122°F)
Storage temperature	min. -40°C (-40°F)	max. +70°C (158°F)
Operating temperature ²	min. -30°C (-22°F)	max. +85°C (185°F)
Junction temperature ²	max. +100°C (212°F)	
Humidity	0 to 95%, non-condensing	
Environment	Outdoor, IP67, suitable for Coastal Environment	
Protection class	III	
IK - for resistance to mechanical shock class	IK10	
Fire protection (Housing)	UL94-V0	
Fire protection (Lens)	UL94-V2	

Performance temperatures are measured on „T_c“

TECHNICAL SPECIFICATION LINE

Sheathing color	Black or Grey
Sheathing material	PVC
Cable weight	55.6 gr./m (16.96 gr./ft)
Conductors cross-section	2x 1mm ² (AWG17) + 3x 0,3mm ² (AWG22)
Conductors material	Copper - AS
Conductors insulation	Polyethylene
Cable dimensions (W x H) ¹	3.00mm x 10.00mm (0.118"x0.394")
LED-Line length	≥70m (229,66') (free pixel distribution)
Cable type	60227 IEC 53 RVV According to IEC 60227-5-1979
Fire protections certifications	EN 60332-1-2:2004 + A12:2020
UV	Yes, UV stabilized

Remarks: (1) according to ISO 2768-1m.

Remarks: (2) The performance must be adjusted depending on the temperature

Remarks: (2) Referring to the max. operating temperature / junction temperature of the LED

CABLE BENDING & NON-BENDING LENGTH

NOTE: Water ingress incurred due to excess cable bending/twisting will not be under warranty by Carl Stahl ARC.

LEAD ASSIGNMENT & CONNECTIONS

PIN#	Description	Color
1	Power +	RED
5	DATA -	YELLOW
2	DMX +	BLUE
3	N.C.	GREEN
4	Power - (GND)	BLACK

The wiring schematic shown above applies when connecting the LED Lines to the **XLED-PS8** power supply.

DMX addressing is carried out either via RDM or using the XLED Node Mapper (see relevant manual).

For the **XLED-LINE-EL42G-RGB**, it is not necessary to connect the green wire to Pin 3 of the socket, as all green wires are not connected (N.C.).

INSTALLATION & HANDLING

Whenever installing LED Dot Lines, please ensure that all of the following instructions are strictly followed.

Handle the strips with care, especially during transport. Do not hold or lift the strips by the cabled sections, as this may place the full weight of the dots on the cables, potentially causing damage (see image below).

CAUTION - It is strongly recommended to maintain equal load distribution across all outputs of the PS8 driver. If perfect load balancing is not possible, strictly **DO NOT** connect more than 56 dots per output. It is also advised to evaluate the voltage drop along each line to ensure that the last dot receives at least the minimum required voltage. **DO NOT** connect more than 168 dots per group, and under no circumstances exceed 336 dots in total per PS8 driver. (For further reference, please refer to the instructions on page 14.)

IMPORTANT – The flat cable used in this product is plastic-based and therefore flexible, but also sensitive to mechanical stress. To prevent damage to the cables and the product, please follow these rules:

- Keep cables away from sharp objects.
- **DO NOT** use aggressive chemicals or solvents during installation.
- **DO NOT** pull on the cables during strip installation.
- Always leave a small amount of slack between each dot before fixing them in place, the cable must not be under tension.
- **DO NOT** twist, knot, crush, or step on the flat cables.
- **DO NOT** bend the cable over its minor axis (see image below).

If bending is necessary, only bend along the flat cable's major axis of symmetry. Please follow the minimum clearances as indicated on page 12 (cable bending & non-bending lengths).

DO NOT create sharp bends or exceed the defined non-bending zones

CONNECTOR HANDLING & INSTALLATION SAFETY REQUIREMENTS

Correct handling of the connectors is essential to ensure long-term mechanical integrity and sealing performance. Installers must follow the installation and operating procedures exactly as described. Failure to comply can result in damage to the connector assembly and loss of sealing capability.

Mandatory Handling Instructions:

- All plug connections must be inserted and removed **strictly along their main (longitudinal) axis**.
- **Do not bend, twist, or lever** the connectors during removal. Any extraction force applied perpendicularly to the connector's axis is strictly prohibited.
- If a connector appears difficult to disconnect, apply:
 - A **firmer actuation** of the release/clicking mechanism.
 - A **higher axial pull-out force**, without any lateral movement.

Bending a connector during disconnection can stress the internal threaded components, potentially loosening the nut or damaging the plastic threads. This leads to compromised sealing and mechanical reliability.

These requirements must be understood and strictly followed by all installation personnel.

All plug connections must be inserted and removed **strictly along their main (longitudinal) axis**.

Do not bend, twist, or lever the connectors during removal.

SYSTEM CONFIGURATION

- To guarantee the system's IP rating, ensure, as mentioned above, that the O-ring is present inside each female connector before joining the strips. Tighten and screw the connectors together securely to ensure a IP rating and flawless connection.
- Whenever possible, secure the connection cables using cable ties.
- If necessary, at the end of the installation, set up the LED Line addresses via the **XLED-PS8**, using one of the two available procedures: *hardware* or *software* (see XLED-PS8 user guide for reference).
- Perform a functional check on all LED Lines using the **XLED-PS8** self-diagnostic test. Check for any signal irregularities (see XLED-PS8 user guide for reference).
- **WARNING:** For your own safety, avoid looking directly into the LED light source.

INSTALLATION & SAFETY INSTRUCTIONS

Devices must be installed by qualified personnel in compliance with all pertaining regulations.

- Before installation, please visit the product page at www.x-led.de to download the latest version of the installation instructions.
- Only authorized and trained personnel should operate the device. For technical assistance or service-related inquiries, please contact **Carl Stahl ARC GmbH** directly.
- Always refer to the technical parameters in the datasheet. All items are subject to technical modifications.
- The LED modules and all their components must not be mechanically stressed.
(Avoid excessive force, e.g. from screws or excessive bending.)
- Follow all safety instructions included in this manual to ensure correct powering of the device. Refer to the User Manual for proper usage guidelines.
- Consult the circuit diagram to ensure correct wiring.
- Important! Before performing any work, ensure the device is completely disconnected from the main power supply.
- Do not solder cable strands. Use cable strand sleeves instead.
- Make sure protection against line voltage shock is provided during installation. We recommend securing the installation by RCD circuit breakers.
- Flawless electrical connectivity must be ensured at all times.
- Do not install or remove LED-Dots / LED-Lines while the device is powered. Connecting LED-Dots / LED-Lines to a powered device may cause damage and will void the product warranty.
- Mind the operating temperatures and ambient temperatures of the device according to the technical data sheet.
IMPORTANT: In the unlikely event of continuous operation of the LED modules at full RGB output (100%), the ambient temperature must not exceed 45°C. Solar radiation and the resulting self-heating of the module must also be taken into account, as they may lead to increased temperatures.
- Do not install the device on flammable surfaces. Maintain a minimum safety distance of 0.1m (3.937") from flammable materials. Adjacent components must be temperature-resistant up to 90°C (194°F).
- Do not place heat insulation materials on the device.
- Ensure the input/output voltage matches the specified range. Over-voltage or under-voltage may damage the LED-Line.
- Do not attempt installation in wet or extreme weather conditions.
- Do not leave or expose the LED Line to wet, rainy, or snowy environments when it is not connected or when an end cap is not in use.
- Do not operate the device in an electric circuit shared with inductive consumers, such as: Fluorescent lamps, Gas discharge lamps, Ventilators. Activating inductive consumers in the same circuit may cause damage to the operating device.
- Do not modify the device in any way. No liability will be assumed for damage caused by alterations, improper use, or faulty installation.
- Ensure that the LED-Line is not accessible to unauthorized persons, especially in public or commercial spaces.
- During operation, it is possible for the product to generate heat. To ensure safety and guarantee its longevity, it is imperative that touching or conducting maintenance work on the product is strictly prohibited while it is in an active or heated state.
- The LED modules, both in operation and in storage, must not come into contact with aggressive chemical substances.
- Pay attention to standard ESD precautions when installing the modules.
- The device must NOT be installed in confined spaces without a constantly circulating air flow.
- Do NOT use the LED Dots / LED Lines if the housing, cable or sealing are damaged.

SAFETY INSTRUCTIONS & POWER SUPPLY REQUIREMENTS

To ensure the safe and reliable operation of both the LED-DOTs and our power supply, it is crucial to install surge protection devices to safeguard both the branch circuit and the connected equipment. Always adhere to local electrical codes.

Ensure that protective measures are in place to address:

1. Short Circuiting
2. Electrical Overloading
3. Over-Heating due to excessive operating voltage

LED CHARACTERISTICS

LEDs are semiconductor devices whose performance is subject to inherent variability within the semiconductor industry. To ensure consistent performance across a product, LED manufacturers sort LEDs into bins based on preset parameters such as forward voltage, brightness, etc. This "binning" process is purely a sorting function and not a correction process. Variations in the manufacturing process inevitably result in different binning distributions across production batches. Carl Stahl ARC uses the closest binned LEDs in its products to minimize variations within the model range. As with all electronic components, LED output decreases over time – a phenomenon known as lumen degradation. Therefore, it is nearly impossible to expect identical photometric performance from two LED products with different service life spans. The rate of LED degradation depends on various factors, such as operating efficiency, duration of continuous operation, and, most importantly, environmental conditions (e.g., ambient temperature). When operating under optimal temperature conditions and with proper ventilation, LEDs enjoy a longer lifespan compared to conventional light sources. When using or installing LEDs, care should be taken to ensure that the devices operate within the conditions specified in the respective product documentation.

CLEANING & MAINTENANCE

Regular cleaning of the product is required to maintain its performance and longevity. The process is straightforward but must be done regularly to prevent the buildup of dirt and dust, which can lead to an increase in temperature and a decrease in light output. Use solvent-free cleaning agents only and do not employ aggressive chemicals or high pressure cleaner. Ensure that the LED-DOT is turned off and has cooled down completely. Operate device only after complete drying.

WARRANTY

We provide a 5-year warranty for our **XLED-LINEs & XLED-DOTs** starting from the date of purchase. Any other system-related products (e.g. products from other manufacturers) are covered by their standard warranty terms.

For interior installations, a failure rate of up to 3% and for exterior installations, a failure rate of up to 5% may occur. Please note that these failure rates do not constitute a warranty claim.

Failures, damage, or consequential damage to the LED-DOTs or LED-LINEs caused by improper installation, mounting, or handling are not covered under the warranty. Visual changes due to UV exposure, salt, or other environmental factors that do not affect the functional behavior of the product are not covered by the warranty. Damage resulting from exceeding the specified operating temperature limits is not covered. It is the responsibility of the client to ensure that the operating temperature stays within the recommended range.

We advise ordering a sufficient quantity of spare parts for future needs. For professional replacement and installation, we offer training by our specialists. Compliance with our installation and maintenance guidelines is a requirement for this warranty to be valid.

Issues arising due to site and application conditions that are not specifically addressed, will not be covered by the warranty unless the client has informed us of these conditions in advance. Installation must be performed by trained and qualified personnel to ensure the warranty is valid.

For all other conditions and claims, our General Sales and Planning Terms apply. These terms are available for download on our website.

SERVICE CONDITIONS

Service and repair requests must be accompanied by proof of purchase and a detailed description of the issue. Service is only available if the product (e.g. LED-Line, power supply) has been installed, operated, and maintained in accordance with our guidelines. Any modification or unauthorized repair of the product will void the warranty.

SERVICE AND SUPPORT

If any issues arise with one of our products, customers can contact our service department for support. Our team will assist with troubleshooting and, if necessary, arrange for repairs or replacements in line with the warranty terms. We provide technical support via phone, email, or online chat. For more complex service needs, our trained technicians are available for on-site support, subject to additional charges. Service requests can be submitted through our website or directly to our customer support team.

ENVIRONMENTAL SAFETY AND WASTE DISPOSAL

This device must be disposed of at a suitable, legally regulated disposal center that allows for the recycling of electrical and electronic equipment, components, and materials once it reaches its end of life (EOL). Proper disposal in accordance with environmental safety regulations and modern waste management procedures significantly reduces the negative impact of these materials on the environment and public health while ensuring the correct recycling, reuse, and redistribution of key components.

Unlawful disposal of this device and its materials is strictly prohibited. Any inadequate or illegal disposal practices may result in administrative sanctions or penalties, as per the applicable laws and regulations in your country.
